

Company Profile Sheet

Position

Realtron Tech. Inc. positions itself as the leading integrated networking embedded software total solutions provider. The goal is to enable faster networking product development in exchange for early market entry leading our clients toward good profits.

Overview

Facing speedy innovated revolutions in this networking processing business as it is today. Time-to-Market is the absolute key to success and great profit margins. In order to survive, network equipment and system providers must somehow conquer the challenges of compressing product development cycles, extending the flexibility as well as multiplying product performance.

Over the years Realtron has developed a reputation for providing easy and quick solution to embedded systems as well complete supports to our customers. They selected Realtron because they know that our software can save their valuable time on system developing and certainly can rush their products to the target markets.

Technology

Realtron is masterful with embedded network software. Many of our clients, networking systems companies found their product development cycles was reduced by half and millions dollars were saved thanks to our professions in the development of portable embedded protocol with supporting of embedded Internet protocols on CISC, RISC and DSP architectures. Realtron offers a pre-integrated layer 2, 3, 4 and real-time kernel software components total solution for SoC industry as well

as chassis based I.S.P. market.

With its own innovative HoloDeck™ technology, which offers the fastest approach for product prototype development, Realtron provides the world-class embedded product development to the networking and system companies.

In addition to its software development, Realtron also operates a full-fledged Internetworking product development consultant services, providing system planning, architect, design, integration, troubleshooting and custom software development, with an emphasis on any embedded system /windows networking environments.

Team Work

“Our development team has more than 200 years of combined networking software and systems experience. “ ---- George Shung , V.P. of Technology; Realtron Technology Inc.----

Realtron organizes an outstanding team of professionals with strong backgrounds and specialties in network system software developing. We have one good team with experience from many advanced companies in the industry. Realtron's engineering expertise includes Software System Architect, routing protocol, big ISP's network management, Layer 2 issues, wireless driver /protocol, Wireless CDMA Systems, Wireless LANs, SNMP/Web Management, Java Applet/Web, Server Management, system related code and etc.

Partnership

Realtron has good partnerships with many network system companies and semiconductor OEMs. We works closely with our partners to optimize our software performance and we welcome more friendly partners in the future.
